

# SMART Transmitter Power Supply KFD2-STC5-Ex1.20.H

- 1-channel isolated barrier
- 24 V DC supply (Power Rail)
- Input 2-wire and 3-wire SMART transmitters and 2-wire SMART current sources
- Signal splitter (1 input and 2 outputs)
- Dual output 0/4 mA ... 20 mA, current sink/current source
- Terminals with test points
- High field voltage 17 V DC
- SIL 2 (SC 3) acc. to IEC/EN 61508

## Function

This isolated barrier is used for intrinsic safety applications. The device supplies 2-wire and 3-wire SMART transmitters, and can also be used with 2-wire SMART current sources. It transfers the analog input signal to the safe area as two isolated output signals. Digital signals may be superimposed on the input signal in the hazardous or non-hazardous area and are transferred bi-directionally. The device provides a sink mode or a source mode output on the safe area terminals. The device has an internal resistor. Use this resistor if the HART communication resistance in the control circuit is too low. Test sockets for the connection of HART communicators are integrated into the terminals of the device.

## Connection

## Technical Data

### General specifications

Signal type Analog input

### Functional safety related parameters

Safety Integrity Level (SIL) SIL 2

Systematic capability (SC) SC 3

### Supply

Connection Power Rail or terminals 14+, 15-

Rated voltage  $U_r$  18 ... 30 V DC

Ripple within the supply tolerance

Power dissipation  $\leq 1$  W at maximum load

## Application

The device supports the following SMART protocols:

- HART
- BRAIN
- Foxboro

## Connection

The device provides 2 outputs on the control side terminals. These outputs can be operated in any combination of the current sink operating mode and current source operating mode. Please refer to the following diagram for connection.

## Connection

Short circuit unused outputs decreases the internal power dissipation by up to 100 mW per channel.
